

Bhaasha Seekho — Feature Build Audit

A verified, code-level inventory of what's actually implemented and live, priced against current India freelance market rates rather than the original flat figure.

PREPARED	PROJECT	BENCHMARK	METHOD
August 2, 2026	bhaashaseekho.com	2026 India freelance rates	Code audit + market search

9	5	3	₹89,500
Pages live & functional	Integrations confirmed live	Gaps / not yet complete	Recommended 2026 quote

01 Feature Inventory

Original scope: 5-page site + backend/leads + Brevo email notifications + WhatsApp click-to-chat + GTM tracking + domain activation, no admin dashboard. Below is every route, integration, and system actually found in the codebase.

Pages — 9 routes, all server-rendered, none stubbed

ROUTE	STATUS	NOTES
/	Done	Hero, value props, course preview, testimonials, embedded lead form
/about	Content gap	Founder section hidden — no real bio/photo supplied yet
/courses	Done	Listing page, now shows starting price per course
/courses/kannada	Done	Full 9-section detail page — see Beyond Scope
/courses/hindi	Done	Same build depth as Kannada
/courses/telugu	Done	Same build depth as Kannada
/contact	Done	WhatsApp CTA + fallback form, both wired to backend
/register	Done	Dedicated lead-capture landing page
/privacy-policy	Done	Placeholder bracket text replaced with clean copy

Forms & lead capture

The homepage form and the /register form are the **same component** rendered twice, not two separate builds — worth knowing so it isn't double-counted.

FORM	FIELDS	ENDPOINT	STORAGE	NOTIFICATION
Homepage + /register	name, phone, email, interest, howHeard, honeypot	POST /api/leads	MongoDB Lead	Owner + user email
Contact (/contact)	name, email, message, honeypot	POST /api/contact	MongoDB Contact	Owner + user email

Backend — MongoDB Atlas Confirmed live

Real Atlas connection string present in the environment config; connection personally verified (ping + write + read) in a prior session. Both API routes treat the database write as the **critical path** — a submission cannot silently vanish even if the follow-up email fails.

Email notifications — Brevo Confirmed live

Real API key plus a **domain-authenticated** sender (noreply@bhaashaseekho.com) — this required SPF/DKIM/DMARC DNS records on Hostinger and passing Brevo's domain verification, not just pasting a key. Real test emails were sent and confirmed received. Both owner-notification and customer-confirmation emails use a shared custom-branded HTML template, not plain text.

WhatsApp click-to-chat Confirmed live

One reusable component in three placements (floating global button, primary CTA on /contact, inline variant), wired to the real business number with a pre-filled message. Verified: renders as a styled icon button everywhere, never a raw link.

Analytics / tracking — Google Tag Manager Not activated

The GTM head script and noscript fallback are correctly built but gated behind a container ID environment variable that is **not currently set** — checked directly. The container is not loading on the live site right now. The plumbing is ready; going live needs only a container ID, no code changes. **This should not be invoiced as delivered** until the ID is set and a real hit is confirmed (GTM Preview or a GA4 realtime event).

SEO Exceeds "basic"

Per-page title/description/canonical on all 9 routes; full Open Graph and Twitter Card tags including a generated branded share image; JSON-LD structured data (Organization, Breadcrumbs on every inner page, Course schema on the listing and

all three detail pages); a dynamic sitemap covering all 9 routes; a robots.txt disallowing /api/; Google Search Console verified with the sitemap submitted and confirmed read. This is meaningfully more than a basic setup — see the pricing note below.

Admin / dashboard Confirmed absent

No /admin route, no auth/session system, no dashboard UI anywhere in the codebase. Matches the "no admin dashboard" scope exactly.

Domain / DNS

bhaashaseekho.com on Hostinger DNS, pointed at Vercel (A + CNAME). Beyond basic pointing: five additional DNS records were added for Brevo's email domain authentication (TXT verification, two DKIM CNAMEs, DMARC TXT, branded-link CNAME) — genuine multi-step DNS work, still the same conceptual line item, just executed deeper than typical.

Beyond the original 5-page scope Flagged

The three course detail subpages are the standout item. Each is a nine-section landing page in its own right — themed hero with a native-script watermark, "who this is for," a three-phase learning-journey timeline (responsive: desktop columns collapsing to a mobile accordion, zero extra client-side JavaScript), six curriculum modules, format details, a pricing card, testimonials, an FAQ accordion, and a closing CTA. Built on six dedicated reusable components, a roughly 400-line structured content model, and individual metadata plus JSON-LD per page. This reads as three additional small landing pages, not a course-page template — the clearest change-order candidate in the build.

02 **Gap Check**

Cross-referenced against earlier audit findings. Anything listed here is real, working infrastructure — but incomplete in a way that shouldn't be invoiced as finished.

ITEM	REAL STATUS
Founder bio / photo (/about)	Section hidden, not deleted — ready to enable, waiting on real content from the client
Tutor bio / photo (3 course pages)	Same — hidden pending real content
GTM tracking	Code ready, container ID not configured — not firing yet
Privacy policy	Placeholder brackets fixed, copy is clean — but still generic, not lawyer-reviewed
Social links (Instagram / Facebook)	Removed — client has no live accounts yet, not a dev gap
CTA routing inconsistency	Found and fixed in a prior pass — no longer a gap

03 2026 Market-Rate Quote

Priced against current India freelance market rates for comparable work — not the original ₹18,000 flat figure. Ranges below come from live market data on 2026 India freelance/agency pricing for each category; the recommended charge is a fair point within that range for a solo-freelancer build of this quality.

FEATURE BUCKET	2026 INDIA MARKET RATE	WHAT WAS ACTUALLY BUILT	RECOMMENDED
Core 5-page marketing site	₹15,000–80,000 basic; ₹80,000–2,00,000 polished / SEO-ready	Fully custom build, no template, responsive, JSON-LD throughout	₹35,000
3 course detail subpages	₹5,000–20,000 per custom landing page	9 sections each, 6 dedicated components — closer to 3 mini landing pages	₹18,000
Lead capture — 2 form flows	₹5,000–20,000 per custom form w/ CRM-level integration	DB-backed, validated, honeypot + rate-limited, UTM-tracked	₹15,000
Brevo email automation	₹9,000–17,000 for a basic automated sequence	4 branded templates (2 forms × 2 directions) + domain-authenticated sender	₹12,000
WhatsApp click-to-chat	Usually bundled; quick standalone build	3 placements, live business number	₹1,500
Technical SEO (one-time build)	Basic on-page SEO often bundled free in ₹30k–90k packages	Structured data, dynamic sitemap, OG image generation, GSC verify + submit — across 9 pages	₹6,000
Domain + DNS + email auth	Usually bundled with hosting setup	5 DNS records for Brevo authentication, beyond basic pointing	₹2,000
Recommended total — fresh 2026 quote for this exact scope			₹89,500

READING THIS NUMBER CORRECTLY

- Sanity check: a "full business website with lead generation, WhatsApp integration, and local SEO" — roughly the core 5 pages minus the course subpages — is already pricing at **₹45,000–90,000** in today's India freelance market on its own. Add the 3 non-trivial course subpages, and **₹85,000–95,000** is the realistic band for the full build.
- This is what the scope is **worth today**, not an instruction to retroactively re-bill a client who already agreed to ₹18,000. Re-pricing already-agreed work is a renegotiation conversation, not a silent invoice change — use this figure for a new proposal or a going-forward rate, and decide separately how (or whether) to raise it with an existing client.
- GTM tracking is priced at ₹0 above — it's not activated yet (see Gap Check), so it isn't part of a defensible quote until it's confirmed firing.

Compiled from a direct read of the repository, live environment config, and 2026 India freelance market search.
